University Report — Massachusetts Institute of Technology

Sample — anonymized demo. This is a real end-to-end search with the student's identity removed (name changed, school and personal finances generalized). It shows the format and depth you get, not a real person's private file.

1. Snapshot

Field	Value
University	Massachusetts Institute of Technology
Location	USA / Cambridge, Massachusetts
Setting	urban university city, across the Charles River from Boston
Type & size	private research university · 4,561 undergraduates (11,816 students in total)
Overall rank	QS #1 in the world, 2026-27 edition (15th consecutive year); QS #1 for Engineering & Technology and for Mechanical, Aeronautical & Manufacturing Engineering
How to apply	MIT's own application portal, not the Common App; Early Action (1 November, non-binding and not single-choice) or Regular Action (4 January)
Admission likelihood	Reach — 4.6% admitted overall, 2.0% of international applicants (Class of 2029)
Est. net cost after aid (MYR)	~RM 22,000/yr your share (~RM 87,000 over four years) if MIT sets your parents' contribution at zero, as its income bands suggest; approximate
Your priorities	1. Scholarship · 2. Hands-on experience · 3. Ranking · 4. Location · 5. Employability · 6. Recognition (hard gate)

Key terms

New to these? Here's what the shorthand in this guide means — tap a linked term anywhere below to jump back here.

- **EA** — **Early Action** — apply early for an earlier decision; *non-binding*, so you stay free to compare offers and decline.
- **cost of attendance** — The university's official all-in yearly price — tuition **plus** housing, food, fees, books and personal expenses. This is the number financial aid is measured against, not the tuition figure alone.
- **demonstrated need** — Your cost of attendance minus what the university calculates your family can pay. "Meets 100% of need" means it covers that gap — it does not automatically mean you pay nothing, so check what's left for you.

- **student contribution** — The amount a US aid package expects *you* (not your parents) to contribute each year, usually from summer or term-time campus work. It is part of the package, so it is not covered by the grant.
- **need-blind** — The university decides admission *without* looking at whether you asked for financial aid — requesting aid can't hurt your chances.
- **CSS Profile** — The College Board's detailed financial-aid application most US universities use to assess your need (separate from the FAFSA). Opens 1 October.
- **IDOC** — College Board's Institutional Documentation Service — where you upload your parents' tax/income documents for financial aid.
- **fee waiver** — A request to cancel the application fee on the grounds of financial need — so you pay nothing to apply.
- **Common App** — The Common Application — one online form plus one main essay you reuse across many US universities.
- **self-report** — You type your own test scores into the application; you only pay to send official scores once you enrol.
- **School Report** — A form (plus a letter) your school counsellor submits about you and your school.
- **SAT** — A standardised US university-entrance exam; many US universities require the SAT or the ACT.
- **ACT** — A standardised US university-entrance exam; an accepted alternative to the SAT.
- **IELTS** — International English Language Testing System — an English-proficiency test. Your English-medium A-Levels waive it at many universities, but not all.
- **JPA** — Malaysian government overseas-study sponsorship (JPA / MARA, via the PKJM programme) — a route to full funding for eligible students.
- **Yayasan Khazanah** — A Malaysian foundation offering competitive scholarships to study at top global universities.
- **OPT** — **Optional Practical Training** — US work permission that lets you work in your field for up to 12 months after graduating on a student visa.
- **STEM OPT** — **STEM OPT extension** — a 24-month extension of OPT for science/engineering degrees, giving up to 36 months of US work authorisation after you graduate.
- **ABET** — The US accreditation board for engineering and technology degrees. An ABET-accredited degree is recognised internationally and eases professional registration back home.
- **Washington Accord** — An international agreement that mutually recognises engineering degrees between member countries (the US, UK, Australia and Malaysia all belong), so an accredited degree carries over.
- **BEM** — **Board of Engineers Malaysia** — the body you register with to practise as an engineer in Malaysia; it recognises accredited degrees via the Washington Accord.
- **MQA** — **Malaysian Qualifications Agency** — the Malaysian body that recognises foreign qualifications; check its register to confirm your degree counts back home.
- **Common Data Set** — A standardised set of admissions and enrolment statistics each US university publishes — the reliable place to check real admit rates and what admitted students look like.

- **MARA** — **Majlis Amanah Rakyat** — a Malaysian government agency that sponsors and lends to Bumiputera students for pre-university and degree study, locally and abroad.
- **SHIP** — **Student Health Insurance Plan** — the university's own health cover, billed automatically each year unless you prove you have comparable insurance and get a waiver approved.
- **PTPTN** — **Perbadanan Tabung Pendidikan Tinggi Nasional** — Malaysia's national education *loan* fund, not a scholarship. It is aimed at study at approved institutions and is repayable.
- **Kijang Scholarship** — Bank Negara Malaysia's scholarship for high-scoring Malaysians to study abroad in finance-adjacent fields, including data science; it carries a service bond of two years for each sponsored year.
- **UROP** — **Undergraduate Research Opportunities Program** — MIT's system for pairing undergraduates with faculty research projects, for pay, for credit or as a volunteer, from first year onwards.
- **GIRs** — **General Institute Requirements** — the core every MIT undergraduate takes whatever the major: maths, physics, chemistry, biology, a lab, plus eight humanities, arts and social science subjects.
- **HASS** — **Humanities, Arts and Social Sciences** — MIT's breadth requirement, eight subjects outside science and engineering, two of them writing-intensive.
- **IAP** — **Independent Activities Period** — the four weeks each January when MIT suspends normal classes for projects, short courses, competitions, internships and travel. No extra tuition for students enrolled in the surrounding terms.
- **musalla** — A dedicated Muslim prayer room, typically with washing facilities for wudu.
- **MBTA** — **Massachusetts Bay Transportation Authority** — greater Boston's public transport network, known locally as 'the T'; its Red Line subway stops on MIT's campus at Kendall/MIT.
- **E-Verify** — The US government system employers use to confirm a hire may legally work. Only an E-Verify employer can sponsor the 24-month STEM OPT extension.
- **USCIS** — **United States Citizenship and Immigration Services** — the US agency that decides immigration applications. You file OPT, STEM OPT and any extension of stay with USCIS, with a fee and a processing wait.
- **QS** — **QS World University Rankings** — one of the three global university league tables, published annually by Quacquarelli Symonds. Weighted heavily toward academic and employer reputation surveys.
- **SPM** — **Sijil Pelajaran Malaysia** — the Malaysian national exam taken at the end of Form 5, before A-Levels or a foundation year.
- **H-1B** — The US employer-sponsored work visa most graduates need after their post-study work permit runs out. It is allocated by lottery, so it is not guaranteed.
- **F-1** — The standard US student visa.

2. Identity & what it's known for

MIT's motto is *Mens et Manus*, "mind and hand", and the place is organised around the second word as much as the first. Admissions puts the mission in one line: "MIT's mission is to use science, technology, and other areas of scholarship to make the world better." In practice you are expected to

build the thing, not only understand it. Paid lab research, machine shops and competition-based classes are how the degree is taught, not extras added on top.

What it is known for	The evidence
Rank	QS world number one in the 2026-27 edition, for the 15th year running. First in 12 subjects, including Engineering & Technology; Mechanical, Aeronautical & Manufacturing Engineering; Electrical & Electronic Engineering; Computer Science & Information Systems; and Data Science & Artificial Intelligence
A small undergraduate body inside a large research institute	11,816 students: 4,561 undergraduates and 7,255 graduate students
Teaching scale	8 students per faculty member; about 69% of class sections have fewer than 20 students
Research as the default	MIT says over 90% of undergraduates work on a paid research project through UROP before graduating
Breadth	56 undergraduate majors and 62 minors
People stay and finish	99% of first-years return for a second year; 96% graduate within six years

It is also a place that gives its work away. OpenCourseWare has published material from more than 2,500 MIT courses since 2001, free and with no account needed, so you can open the first mechanical engineering subjects tonight and find out whether you like them.

If you taught yourself electronics by taking things apart, this is the identity on your list that most closely describes what you already do. The open question is not whether MIT suits you. It is whether you can show MIT that it does, and that is what the next two sections are about.

3. Who it's for — the archetype & your fit

The archetype: the maker who also does the maths. MIT recruits people who use science and engineering to make things, and it says so in public. Admissions lists the qualities it looks for and states that "it's really the match between the applicant and the Institute that drives our selection process." Here is that list against what is on your file.

What MIT says it wants	Honest read on your fit
Alignment with the mission — MIT adds that "tutoring a single kid in math changes the world", so scale is not the test	Strong. Your goal is to build products that solve problems, which is close to MIT's own sentence about itself.
Collaborative and cooperative spirit — "The core of the MIT community is collaboration and cooperation"	Untested on paper. Nothing on your file is a team project yet.
Initiative	Strong on the academic side: Maths, Further Maths, Physics and Chemistry together is the hardest standard A-Level load there is.
Risk-taking — applicants who are "not afraid to fail"	You have the story, but only in your head. Taking things apart and rebuilding them is exactly this, and it is not written down anywhere.
Hands-on creativity — "Innovation is risky and messy!"	Your strongest card in spirit, your weakest in evidence. See Getting in for how to document it.
Intensity, curiosity and excitement — "Choose quality over quantity."	Works in your favour. MIT's activities form has room for four entries, so depth in one or two things is what it is built to read.
The ability to prioritise balance — "Finding a balance between work and play is incredibly important at MIT and in life"	Neutral. Bring one thing you do purely because you enjoy it.

What MIT says it wants	Honest read on your fit
The character of the MIT community — "Applicants who are a good fit for MIT are trailblazers"	Under-evidenced so far.

How MIT differs as an institution

Lens	MIT	What it means for you
Curriculum shape	A fixed science core for everyone, then your major	Less free choice in year one than an open-curriculum university such as Brown, more shared ground with every classmate
Size and setting	4,561 undergraduates on an urban campus	Small enough to know people, but not a college town
Aid model	Need-blind and full-need for international students, no merit awards	The best fit on your list for your top priority; details in Costs and Scholarships
Culture	Collaborative, intense, builder-minded	Close to how you already like to work; the workload is the price

The verdict. In temperament you sit near the centre of what MIT is looking for, closer than at any grades-first system on your list. Your gap is not fit, it is documented fit: MIT is being asked to believe in a builder whose building is currently invisible.

4. Getting in — requirements, who gets in & your fit

MIT publishes its own numbers. The most recent class on its statistics page is the Class of 2029, admitted in 2025.

Measure	Class of 2029
Applications	29,281
Admitted	1,334, which is **4.6%**
Early Action	12,052 applied; 721 admitted (6.0%); 7,486 deferred to Regular Action, of whom 175 were later admitted
Regular Action	17,229 new applicants; 24,715 considered once deferred applicants are added; 603 admitted (2.4% of those considered)

Measure	Class of 2029
US citizens and permanent residents	22,355 applied; 1,198 admitted (5.4%)
International applicants	**6,926 applied; 136 admitted (2.0%)**
Wait list	561 offered a place; 10 admitted
SAT Maths, middle 50% of admitted students	780–800
SAT Reading and Writing, middle 50%	740–780
ACT composite, middle 50%	34–36
Enrolled class	1,155 students; 11% international, from 56 countries

Your read: Reach. Predicted A*A*A*A* puts you well above any academic bar MIT could set, and MIT sets none. It has no grade cutoff, and it says "we do not have caps or quotas for countries", so nothing about applying from Malaysia counts against you. But at a 2.0% international admit rate, grades are a filter you pass, not an argument you win. This stays a Reach whatever your A2 results are, and it cannot be your only US application.

> ⚠ **MIT requires the SAT or the ACT, and you have not sat either.** MIT's wording is "We require the SAT or the ACT for both prospective first-year and transfer students." There is no test-optional route. The test must be taken before 30 November for Early Action or before 31 December for Regular Action. The SAT sittings left are **7 November 2026** (registration closes 23 October, late registration 27 October) and **5 December 2026** (registration closes 20 November). Miss both and you cannot apply to MIT this cycle.

What applying here demands

Component	What MIT asks	Where you stand
School record	No cutoff and no required school subjects. Predicted grades are welcome; final grades are only checked if you are admitted	Clears comfortably

Component	What MIT asks	Where you stand
SAT or ACT	Required. No cutoff or recommended score; MIT looks mainly at your highest score in each section across sittings, and you self-report	Not yet sat — see the warning above
English test	Not required. "Strongly recommended" only if you have used English for fewer than five years or do not speak it at home or in school. If you send one, IELTS minimum is 7 and the recommended score is 7.5	You study in English at your college, so the recommendation is not aimed at you. If you sit IELTS for other universities anyway, 7.5 is the score that also serves MIT
Essays	Four short essays of about 100–200 words each, four more responses of 40–50 words, and an optional additional-information box. No long personal statement	MIT-only work: nothing written for the Common App transfers across
Activities	A form with room for four entries, used instead of a CV	Suits depth over a long list
Teacher letters	Two. MIT recommends one from a maths or science teacher and one from a humanities, social science or language teacher, and says the split "is not a hard requirement"	All four of your subjects are maths or science, so decide now who writes the second letter
School report	A Secondary School Report with transcript from a counsellor-type recommender	Ask your college early; it needs your predicted grades
Interview	With an MIT graduate volunteer, in person where possible, if one is available. If none is, it is waived and "your application will not be adversely affected"	Take it if offered
Maker Portfolio	Optional, USD 10, reviewed by "MIT faculty and alumni with prolific maker experience"	The most useful optional item for you — see below
Application fee	USD 75, or a fee waiver requested inside the application, open to international applicants	No effect on your chances

Early Action or Regular Action. Early Action is due 1 November with an answer in mid-December; Regular Action is due 4 January 2027 with an answer in mid-March. MIT's Early Action "isn't single-choice, binding, or anything like that", and MIT puts no limit on where else you apply, though you

must still obey any other university's single-choice rule. MIT also says it has no preference between the two rounds and that there is no strategic benefit to either. One catch: if you are denied in Early Action you cannot reapply in Regular Action that year. As of mid-October 2026, Early Action is only realistic if your essays and letters are already under way. Regular Action with the 5 December SAT costs you nothing in the odds.

Who actually gets in

- MIT's 2025-26 Common Data Set rates one factor "very important" in admission: character and personal qualities. Class rank is only "considered", and showing interest in MIT is not considered at all.
- The Malaysian admits who reach the news are international-olympiad level. The student admitted for 2025 from Kolej MARA Banting represented Malaysia at the International Mathematical Olympiad three years running and won a bronze medal. The two admitted in 2024 from INTI Penang's A-Level programme both belong to the Malaysian science-olympiad alumni association.
- One of those 2024 admits told the college that "MIT has only accepted one Malaysian undergraduate in the past four years". That is a student's claim, not MIT's. MIT's own international office counted five Malaysian undergraduates enrolled in 2025-26.
- For unedited voices, read the MIT Admissions blogs at mitadmissions.org/blogs, written by current students. For decision threads, r/mitadmissions (reddit.com/r/mitadmissions) fills up each December and March. Not found — free search cannot read Reddit, so no thread is quoted here.

Your profile against that. Your academics match the admitted range once the SAT is in. The visible gap is everything else: your file shows no competitions, research, team projects or finished builds, while the admits above each had one thing they had pushed to national or international level. MIT does not require olympiads. It does need to see what you make.

The Maker Portfolio is built for this. It asks "what you make, how you make it, and why you make it", takes up to 25 media attachments and two minutes of video, and MIT says "We are more interested in your build process than your end results." It accepts software: "All code projects must include your codebase (ideally version-controlled) AND a working demonstration of your project." Since programming is your strongest area so far, one real project with its code and a demo is the most direct way to turn the tinkering into evidence before January.

If you are not admitted. MIT has no foundation or pathway year. The only other undergraduate door is transfer: you need at least two completed terms at another university, you can apply from your second term there, international students can only apply for September entry, and that deadline is 1 March. Not found — MIT's transfer pages read here give no admit numbers, so treat transfer as a long shot. The realistic plan is a different finalist first, with MIT as a transfer or postgraduate target later.

Confirm these yourself before you submit

- MIT's deadlines page prints no year. Re-check the Early Action, Regular Action and test cut-off dates on mitadmissions.org.
- Ask MIT Admissions how to handle the second teacher letter if your college has no humanities or language teacher who knows you.
- Confirm your college can send the Secondary School Report and predicted grades by your chosen deadline.

5. What you'll actually study

You are admitted to MIT, not to a degree. In MIT's words you "apply to the entire university, not to a specific major or school", every first-year starts undeclared, and after year one you may "choose from among any of MIT's courses of study" with "no additional requirements or admission procedures". For someone still deciding between mechanical engineering and software, that is the opposite of the UK model, where the choice is locked on the application form.

Stage	What happens
Year one, autumn term and January	Everything is graded Pass or No Record. A pass needs C-minus work or better; a fail leaves no trace on your transcript
Year one, spring term	Graded A, B, C or No Record
Spring of year one	Most students declare a major by the spring Drop Date; it takes effect at the start of summer, with a new adviser in that department
If you want longer	You can stay undeclared into year two, but must choose by the end of it
Years two to four	Your major, the remaining core, and usually UROP research alongside

The core everyone takes. MIT calls these the GIRs, and they apply whatever you major in:

Requirement	Size
Science	Six subjects: one chemistry, two physics, two mathematics, one biology
HASS	Eight subjects, at least two of them communication-intensive
Restricted science and technology electives	Two subjects
Laboratory	12 units
Physical education and wellness	Four courses plus a swimming requirement
Communication within your major	Two communication-intensive subjects

The eight humanities, arts and social science subjects surprise people who expect a pure engineering school. They are a substantial share of the degree, not a token.

The calendar is two terms with a four-week January period, IAP, between them. The next one runs 4 to 29 January 2027. Regular classes stop and the month fills with short courses, competitions, research and projects.

Your likely routes. MIT names its majors by number, and calls them Courses.

Route	What it is	Why it matters to you
Course 2 — Mechanical Engineering	Core subjects in mechanics and materials, dynamics and control, thermal-fluids, design and manufacturing, numerical computation, measurement, plus a thesis and a capstone design subject. Two restricted electives from a list that includes Introduction to Robotics, feedback control and electromechanical robotic systems. 48 units of free electives	The standard robotics home. There is no separate "robotics track": robotics comes from the electives you pick
Course 2-A — Mechanical Engineering, flexible	The mechanical core plus a concentration of 72 units or more in one focus area. MIT's own examples include "Control, Instrumentation and Robotics" and Entrepreneurship	The closest thing MIT has to a mechatronics degree, and the one that lets you fold computing into a mechanical core
Course 6 — Electrical Engineering and Computer Science	Several degrees, including 6-2 Electrical Engineering and Computer Science, 6-3 Computer Science and Engineering, 6-4 Artificial Intelligence and Decision Making and 6-5 Electrical Engineering with Computing	Where you would go if software wins

The mechanical engineering department itself suggests taking a basic electronics subject early, which fits how you already like to learn.

Switching and combining. Before you declare, switching costs nothing. A double major is possible but has rules: at least three terms completed, a cumulative average of 4.0 or better on MIT's 5.0 scale, all the requirements of both majors, and sign-off from both departments. Minors are the lighter option, with 62 on offer.

Strength in your field is not in doubt: MIT is ranked first in the world for both its mechanical and its electrical engineering subject groups. What you give up compared with a named robotics degree elsewhere is a certificate that says "Robotics". What you gain is the freedom to decide after two terms of real classes.

6. Signature academic experiences

Hands-on experience is your second priority, and this is where MIT is most concrete.

Experience	What it is	When you can start
UROP	MIT's undergraduate research programme. It "cultivates and supports research partnerships between MIT undergraduates and faculty". You can be paid, earn credit or volunteer, in autumn, January, spring or summer	Year one. There is a dedicated January funding deadline for first-time first-years

Experience	What it is	When you can start
2.007 Design and Manufacturing I	A required Course 2 subject. Each student gets "an identical kit of parts" and designs, machines and programs a robot for a head-to-head competition whose theme changes every year. MIT's own account says winning does not affect your grade; the point is running a complex project from start to finish	Usually year two
Capstone design, such as 2.009 The Product Engineering Process	The capstone design subject every Course 2 student takes in some form	Final year
MakerLodge	A student-run programme that trains first-years on shop tools; you make a couple of small objects and can then return in open hours for personal, class or research projects	Year one
Edgerton Center teams	Student-run engineering teams, including RoboTeam, Combat Robotics Club, Driverless (full-scale autonomous race cars), Arcturus (autonomous boats and a submarine), Motorsports, the Solar Electric Vehicle Team, the Rocket Team and MITERS, a student-run project space and machine shop	Year one. The Edgerton page does not say whether teams expect prior experience, so ask each team
Sandbox Innovation Fund	Seed funding of up to USD 25,000 (about RM 101,000) with mentoring, taking no ownership stake, open to "all MIT undergraduate and graduate students". MIT stresses "Our program is not a competition." It supported about 500 student teams a year as of 2022	Any year
Martin Trust Center for MIT Entrepreneurship	The entrepreneurship hub. It runs delta v, a summer accelerator for student founders, and Orbit, an online hub with more than 8,000 members for finding co-founders and advice	Any year
MISTI	MIT's international internship, teaching and study-abroad programme, with about 35 locations. Singapore is one of them; Malaysia is not	Check each programme's year rule

Two of these matter more for you than the list suggests. UROP is the route into a robotics lab before you have chosen a major. And the entrepreneurship support is unusually low-friction: Sandbox asks for an idea and the willingness to work on it, not a winning pitch, which fits a plan of "take a job first, build something on the side".

7. Culture & vibe

Collaborative by design. Collaboration is an admissions criterion here, and MIT backs it with infrastructure: psetpartners.mit.edu exists to "make it easier for MIT students to find classmates to work with on problem sets", matching people each week by timetable and preference. You will be stretched by the work, not by your classmates.

Intense, and MIT measures it. In MIT's 2020 Quality of Life survey, 46% of undergraduates called their academic workload "too heavy" and 65% said they often or very often felt overwhelmed. Those figures are six years old and newer undergraduate breakdowns did not surface in a free search, but the direction is not in dispute. Pass or No Record grading in your first term exists because MIT knows this.

Aspect	What it looks like
Teaching style	Lectures, weekly problem sets that most people work through in groups, and lab or project subjects where you build something
Personality	Builders and problem-solvers more than career-planners. About 19% of bachelor's graduates who went into work in 2025 expected to join a startup
Humour	Playful and technical; see "hacks" under Unique facts
Sport	33 varsity teams, the largest Division III programme in the United States, with about 25% of students playing varsity. Division III gives no athletic scholarships and coaches do not pick the class, so teams are people who simply want to play. Add 30-plus club sports and 20 intramural sports
Fraternities and sororities	About 37% of undergraduates belong to one of MIT's fraternities, sororities or independent living groups. Present, not dominant

Is this energy right for you? If you like working on hard things with other people and do not need to be the best in the room, yes. If steady top grades are how you measure a good term, the first year will be an adjustment: almost everyone here was the strongest student in their school.

8. Student life, housing & food

Housing. "MIT requires all first year students to live on campus for the duration of their first year at MIT." There are 20 residence halls, and "each residence has its own culture and customs, created by students". You are not simply assigned one. First-years tour the halls during Residence Exploration, a multi-day event, and can then ask to swap out of their temporary hall into one they prefer. The swap never moves you without your consent.

Meal plans. A meal plan is compulsory if you live in a hall with its own dining room: Baker House, Maseeh Hall, New Vassar, Next House or Simmons Hall. First-years in those halls must take one of the two largest plans, each USD 4,051.50 a semester (about RM 16,400), which is the figure MIT's cost of attendance already assumes for food. McCormick Hall's dining room is listed as closed for renovation.

Halal food on campus

Where	What is served	Worth knowing
Maseeh Hall dining room, 305 Memorial Drive	Halal at two stations, Oasis and Global, for lunch and dinner. "All served beef & chicken is halal-certified" and "there are no pork products or alcohol used in any recipe"	Needs a meal plan or a paid meal. The online menu has a Halal filter
Argana Falafel, Stratton Student Center	Middle Eastern wraps and plates and Moroccan specials; MIT Dining lists it as "100% Halal"	Opened September 2025. Wraps were USD 9.75 and plates USD 13 at opening
Hayden Courtyard Café, Hayden Library	Sandwiches, salads and snacks, with halal items marked	Not a fully halal counter
Pacific Street Café, 70 Pacific Street	Breakfast, lunch and dinner; named by MIT Dining as serving halal	Ask which items

Every dining hall also serves vegetarian and vegan dishes, and Maseeh has a supervised kosher station. If halal provision matters to you, Maseeh is the hall to rank first.

Life outside class. Beyond the engineering teams in the previous section, the month of January is the big release valve, and Boston's whole student population is one subway ride away. For the outdoors, the MIT Outing Club runs hiking, climbing, skiing, cycling and canoeing trips across New England, rents gear to members and keeps a cabin in central New Hampshire.

Your first weeks. MIT runs more than 20 optional pre-orientation programmes before the main orientation, then orientation itself with an academic fair and residence tours. Arriving, the things that help you blend in are small: learn the course numbers, join a problem-set group in week one, and say yes to one team or club before the workload settles.

Student voices. The MIT Admissions blogs are the best free source: current students writing about housing choices, failing a first exam and what a week looks like. The student newspaper, The Tech, covers dining and housing changes as they happen. r/mit (reddit.com/r/mit) is where enrolled students answer questions, though it could not be read for this report.

9. The city, the area & belonging

Cambridge, Massachusetts. A dense, walkable university city on the north bank of the Charles River, facing Boston. MIT sits at the river's edge with the Kendall Square technology district on its eastern side. It is urban, but university-urban: students, labs and cafés, not a downtown business district.

Topic	The picture
Transport	Kendall/MIT subway station is on campus, on the MBTA line that runs into central Boston one way and to Harvard the other. You will not need a car

Topic	The picture
Safety	Cambridge police recorded 3,611 serious crimes in 2025 on preliminary figures, 474 of them violent, with one homicide in the city all year. MIT has its own police department with a 24-hour emergency line and a SafeRide shuttle
Where to take care	Central Square, the next subway stop from MIT, accounted for 38% of the city's aggravated assaults and 62% of its street robberies in the 2025 report. Be alert there late at night
Weather	Cold, snowy winters. The average January night is about minus 4°C. Budget for a real coat and boots in your first month
Outdoors	The river path starts at the campus edge. Mountains and coast are a planned weekend, not a walk from your door

Against your deal-breaker. You ruled out high-crime areas like downtown Los Angeles. Cambridge is not that: the numbers above are ordinary for a dense American city, and the campus and Kendall Square are busy and well lit. It still asks for more street sense than a Malaysian suburb, mostly around Central Square after dark.

Against your location preference. This is where MIT scores lowest for you. You asked for access to nature and new places to explore. Boston delivers the second in full and the first only with planning. The Outing Club is the practical answer, but if stepping out into green space daily matters, Princeton and Cornell do it better.

Muslim community and prayer. None of this is flagged as a need on your file, so read it as background.

What	Where
Main prayer room	The musalla in W11-110, described by MIT as "the main Muslim prayer room on MIT's campus", used for daily prayers, Friday prayers and community events
Friday prayers	1:15 pm at the W11 musalla, according to the MIT Muslim Students' Association
Other prayer spaces	E52-112 at the Sloan School, the sixth floor of E38 near Kendall station, and room 45-204 in the College of Computing
Chaplaincy	MIT has a Muslim chaplain to the Institute
Nearest mosque	The Islamic Society of Boston mosque at 204 Prospect Street, Cambridge, which draws about 300 people to Friday prayers
Halal off campus	The Helmand, an Afghan restaurant in East Cambridge, and The Halal Guys in Porter Square came up in a free search. Check both before relying on them

Malaysian community. Small, but it now has a name. The Malaysian Student Association at MIT was founded in 2026 "for students to connect, share, and celebrate Malaysian culture". It has a mailing list, and its committee can be reached at mysa-exec@mit.edu. Writing to them is the single best way to ask a Malaysian what MIT is really like. The scale is modest: MIT counted five Malaysian

undergraduates and 22 Malaysian students in total in 2025-26, out of 529 international undergraduates. If a large Malaysian cohort matters to you, NUS wins easily.

10. Costs (full)

> All ringgit figures in this report are converted at RM 4.04 per US dollar, the rate on 5 September 2026, and rounded. They will move with the exchange rate.

The sticker price, 2026-27

Line item	USD per year	MYR per year
Tuition	66,720	~RM 269,500
Student life fee	420	~RM 1,700
Housing	14,090	~RM 56,900
Food	8,104	~RM 32,700
Books, course materials, supplies and equipment	930	~RM 3,800
Personal expenses	2,496	~RM 10,100
Published cost of attendance	**92,760**	**~RM 375,000**
MIT student health plan, charged unless you prove comparable cover	5,148	~RM 20,800
Travel home	Estimated by MIT from your home address	Not in the published total
Four years at this year's prices	**371,040**	**~RM 1.50 million**

MIT's course catalogue prints USD 93,730 for the same year without a breakdown. This table uses the itemised figure from Student Financial Services, which is the one aid is calculated against. Prices rise yearly: the published total was USD 89,340 in 2025-26.

What you would realistically pay

Line	USD per year	MYR per year	Basis
Expected from your parents	Likely 0	Likely RM 0	MIT says that for families earning under USD 100,000 (about RM 404,000) "parents can expect to pay nothing at all". Its median net price for that band in 2025-26 was USD 0
Expected from you	5,400	~RM 21,800	MIT's typical student contribution, meant to come from summer savings and a campus job
Your realistic share	**~5,400**	**~RM 22,000**	
Over four years	**~21,600**	**~RM 87,000**	
Health plan	0 if MIT's Health Insurance Grant covers it	Up to ~RM 20,800 if not	The grant is for MIT's "highest-need undergraduates"; your aid offer will say whether you are one

Why this is an estimate and not a promise: the family income on your file is in a lower-income band, far below MIT's USD 100,000 line. But that line is written around American families "with typical assets", and MIT sets each family's contribution individually from the documents you send. A second property or a family business can raise it.

How the USD 5,400 gets paid. Campus jobs pay at least USD 15 an hour, and MIT says most students earn about USD 1,700 a semester (about RM 6,900). The rest is meant to come from summer earnings. The first USD 5,400 of any outside scholarship can replace it entirely.

One-off costs

Item	USD	MYR
Application fee	75, or a fee waiver	~RM 300
Maker Portfolio	10, waivable	~RM 40
Enrolment deposit	Not found — MIT's catalogue cost page lists the application fee and late-registration fees but no deposit	

11. Scholarships & financial aid

MIT is one of very few American universities that is both need-blind and full-need for international students. Need-blind means, in MIT's words, "we don't consider your ability to pay for college in the admissions process". Full-need means it meets "100% of demonstrated financial need". MIT's catalogue adds that this applies to "every undergraduate, regardless of residency or citizenship status" and that aid "never includes loans". Asking for money cannot cost you the place.

⚠ **MIT gives no merit scholarships, and you only get aid if you file for it.** MIT Scholarships are "awarded based solely on financial need", so A*A*A*A* earns nothing extra. To be considered you must submit the CSS Profile with MIT's code **3514**, and your parents must upload their income documents to IDOC, by **30 November 2026** if you apply Early Action or **15 February 2027** if you apply Regular Action. File nothing and you are billed the full sticker price.

Scheme	What it pays	Who gets it	How and when
MIT Scholarship	Whatever closes the gap between the cost of attendance and what your family can pay. Median award USD 73,666 in 2025-26; for families under USD 100,000 the median was USD 85,236 (about RM 344,400)	Any admitted undergraduate with demonstrated need. 58% of undergraduates hold one. In 2025-26, 411 international undergraduates received need-based aid averaging USD 81,991 (about RM 331,200)	CSS Profile plus IDOC, by the dates above. Late filing brings a later answer, not a penalty. You reapply every year
MIT First Year Grant	USD 2,000 (about RM 8,100), once	MIT's "highest-need first-year students"	Automatic with your aid application
MIT Health Insurance Grant	The cost of MIT's student health plan	MIT's "highest-need undergraduates" who lack adequate cover	Automatic with your aid application
Merit or athletic awards at MIT	Nothing	Nobody	They do not exist here
Yayasan Khazanah — Khazanah Global Scholarship	Listed as "Full"	Malaysians with 3 As at A-Level (forecast results accepted), no older than 21 at enrolment, with leadership and extracurricular involvement. MIT is on the approved list for Engineering & Technology	Undergraduate applications open "in June, yearly". A conditional offer counts, and you may apply while still waiting for a university decision
MARA	Its domestic loan scheme covers Malaysian institutions only. Its overseas-capable scheme is reserved for top graduates of MARA's own colleges	Not open to a private-college student	—

Scheme	What it pays	Who gets it	How and when
JPA	The overseas programme found in a free search takes SPM leavers to Japan, Korea, France and Germany. The federal scholarship portal showed no overseas degree scheme for A-Level holders in October 2026	Not applicable to you	—
Bank Negara Kijang Undergraduate Scholarship	Overseas study with a two-years-of-service-per-year-of-study bond	Engineering is not among its funded fields	—
PTPTN	A loan, for study at Malaysian institutions only	Not applicable to a US degree	—

What the international paperwork involves. Your parents' tax returns or wage statements "from two years ago", uploaded to IDOC, not sent to MIT. A translation into English is needed if they are in Malay, and MIT says "Professional translation is not required". Allow up to two weeks for documents to reach MIT. The offer arrives by email, in mid-January for Early Action and mid-March for Regular Action.

How a Malaysian sponsor would interact with MIT's aid. It does not stack. MIT applies the first USD 5,400 of an outside scholarship to your own contribution, then reduces the MIT Scholarship by the rest. So Khazanah would not make MIT cheaper than MIT already is. Its value at MIT is the leadership programme and Malaysian job attachments. The sponsor matters far more at your UK finalists, where it is the whole funding plan.

Competitiveness. There is no separate scholarship contest at MIT. Aid follows admission by policy, so the only gate is the 2.0% one in Getting in.

12. Outcomes, network & practising in Malaysia

What graduates do

Measure	Figure
Class of 2025 bachelor's graduates going into work	48%

Measure	Figure
Going to graduate school	42%, most often at MIT, Harvard, Stanford and Princeton
Of those going into work, expecting to join a startup	About 19%
Average starting salary for graduates entering industry	USD 145,820 (about RM 589,100), from MIT's most recent graduating survey
Against the US average for new graduates	Offers typically 30–40% higher
Employers hiring from the Class of 2025	Include Apple, Google, Microsoft, Meta, OpenAI, SpaceX, Amazon, Jane Street, McKinsey and Boston Consulting Group
Alumni	148,000 worldwide

Staying to work in the United States. Your stated intent is to work in a stronger-currency economy, and this is the best version of that on your list. On a student visa you can receive "up to 12 months" of OPT after graduating. Engineering and computing degrees are in fields that qualify for a further "24-month extension", the STEM OPT extension, giving up to three years of US work without entering the H-1B lottery.

Condition	Detail
Employer	Must be enrolled in E-Verify and stay in good standing
Timing	You file for the extension up to 90 days before your first OPT year expires
Later study	A further qualifying degree at a higher level can earn one more 24-month extension

It is permission to work, not a route to stay permanently. After three years you still need an employer to sponsor a work visa.

Practising as an engineer in Malaysia. This is your hard gate, and it clears for the mechanical engineering routes.

Check	Result
Course 2	"Accredited by the Engineering Accreditation Commission of ABET" under the criteria for mechanical engineering
Course 2-A	Also ABET-accredited, under the general engineering criteria

Check	Result
Washington Accord	The United States, through ABET, has been a signatory since 1989 and Malaysia, through BEM, since 2009. Under the accord, "accredited engineering degree programs from one member organisation are mutually recognised by all others"
MQA	Not found — MQA's foreign-qualification register is a search form that could not be queried for this report. Look up MIT and your chosen degree at www2.mqa.gov.my/esisraf
Course 6 degrees	Not found — their ABET status was not checked. If you move to a computing degree, engineer registration with BEM is no longer the relevant route anyway

So the order matters. If you want to keep Malaysian engineer registration open, declare Course 2 or Course 2-A, and confirm the MQA entry before you do.

Network. Kendall Square, beside the campus, is a dense cluster of robotics, software and biotech companies, which makes term-time and summer internships a walk away. A 2022 Georgetown University study of 4,500 colleges, cited by MIT, ranked MIT first in the United States for return on investment among bachelor's programmes.

13. Unique facts & quirks

- **Hacks.** MIT's word for elaborate, anonymous, harmless engineering pranks. On the last day of classes in May 1994 a campus police car appeared on top of the Great Dome with its lights flashing. It was the outer panels of a Chevrolet Cavalier on a wooden frame, built overnight, with a dummy officer, a box of donuts, a parking ticket reading "no permit for this location" and the car number pi.
- **Course numbers as identity.** People say "I'm Course 2" long before they say "I study mechanical engineering". Buildings are numbered too, which is why the prayer room is "W11-110".
- **The pirate certificate.** MIT's own fact sheet lists "1 pirate certificate" next to its 56 majors. It is real.
- **Robotics pedigree.** iRobot was founded in 1990 by MIT professor Rodney Brooks with two MIT students, Colin Angle and Helen Greiner. Boston Dynamics was founded in 1992 by Marc Raibert as a spin-off from MIT's Leg Laboratory. And the 2.007 robot contest inspired FIRST, the school robotics competition, which was co-founded by Woodie Flowers, the MIT professor who started the contest.
- **A whole month for projects.** January has no regular classes. Past offerings have included a solar-powered sensor build, a stand-up comedy crash course and private pilot ground school.
- **Collaboration has a web address.** psetpartners.mit.edu matches you with classmates to do problem sets with. No other university on your list has built that.
- **A Malaysian association younger than your application.** The Malaysian Student Association at MIT was founded in 2026.

14. Why here / why hesitate

Theme	The honest read
Scholarship	The strongest answer on your list. Need-blind and full-need for international students, grants with no loans, and a realistic share of about RM 22,000 a year that you are expected to earn yourself. But it depends on being admitted, on filing the aid forms on time, and on MIT reading your family's finances the way its income bands suggest. There is no merit award to fall back on.
Hands-on experience	As good as it gets: research from year one, a robot you build and compete with, student engineering teams, and seed funding for a product idea without having to win a contest. The trade-off is the workload it all sits inside, which close to half of undergraduates have called too heavy.
Ranking	First in the world overall and in both of your possible fields. Nothing on your list is higher.
Location	Your weakest fit here. Cambridge is walkable, well connected and nothing like the environment you ruled out. But it is a city, winter is long, and nature is a planned weekend trip. Princeton and Cornell suit that preference better.
Employability	Elite pay and employers, plus up to three years of US work rights on an engineering or computing degree. But that is temporary permission tied to an eligible employer, not a guaranteed route to stay.
Recognition	Clears for Course 2 and Course 2-A through ABET and the Washington Accord. But it depends on which degree you declare, and the MQA entry is still yours to confirm.
Getting in	The reason MIT cannot be the plan. A 2.0% international admit rate means a strong application still fails most of the time, the SAT is not yet sat, and the Malaysians who get in tend to have one thing at international level. Your best move is a documented build, then make sure the other finalists carry the weight.
Choosing your field	Unusually kind to your indecision. You are admitted to MIT as a whole, declare after two terms of real classes, and can blend mechanical and computing in Course 2-A. The cost is a shared science core in year one that you do not get to skip.
